The Company is pleased to announce mineralised intercepts in diamond drill holes completed south-east and outside of the current Sihayo 1 Resource envelope.

Two deeper diamond drill holes were completed 100m east of the eastern-most drill holes informing the Sihayo 1 North Inferred Resource of 7.1Mt @ 2.71 for 610,000 Oz Au.

Drill hole SHDD057 encountered an intercept of **5m @ 3.95g/t Au** in difficult, strongly faulted ground conditions. Drill hole SHDD058 encountered **7m @ 1.29g/t Au** in a similarly faulted position some 55m grid north of SHDD057.

It is thought that the high degree of faulting has offset mineralisation in this area.

The Company is greatly encouraged by these results, which provide conclusive evidence that the resource remains open towards the south east. These results add further weight to the exploration concept that mineralisation encountered in holes SHDD024 and SHDD025, some 350 – 450m away is part of the same system.

Drill Intercept Table

Hole	Northing (local)	Easting (local)	Azimuth (magnetic)	Dip	Depth (m)	From (m)	To (m)	M	Au g/t

Notes:

1. All assays were determined by 50gm fire assay
2. A 0.5ppm Au lower cut was used
3. A maximum of 2m of consecutive internal waste (material less than 0.5ppm Au) per reported intersection
4. All interval grades were calculated as a weighted average
5. All intervals reported as down hole lengths
